

# Workshop Offers

## Research in Social Responsibility – What Does It Mean?

### Responsible acting in science

The public interest is increasingly focusing the benefits and impact of research activities. Scientists have to deal with these issues. But how can this be done? The workshop provides some proposals.

### Offer to reflect on your own research

Participants can use the workshop to examine their own research projects with the help of a reflection framework and, in joint discussion, consider how their own research project can be designed in a sustainable and socially responsible way.

### Tips for the sustainable design of research processes

The workshop addresses researchers from all disciplines. Together, we will discuss various criteria and quick-check questions that can be used to reflect on and to review research processes.

The workshops are part of the joint project "Research in Social Responsibility - Design, Impact Analysis, Quality Assurance". They are conducted by several institutions of the German non-university research associations. The project is funded by the German Federal Ministry of Education and Research.
